

# Experiment 3

---

## Automation with Selenium

Experiment: Dynamic autocomplete suggestions and checkbox verification

### Purpose

Automate two common web-control tasks: verify that a checkbox changes to the selected state, and use a dynamic suggestion list to choose the exact text India.

### Test environment

| Item            | Value                                                                                                               |
|-----------------|---------------------------------------------------------------------------------------------------------------------|
| Application     | Rahul Shetty Academy - Automation Practice                                                                          |
| URL             | <a href="https://rahulshettyacademy.com/AutomationPractice/">https://rahulshettyacademy.com/AutomationPractice/</a> |
| Controls        | Checkbox: checkBoxOption1; input: autocomplete                                                                      |
| Expected result | Checkbox selected and input value equals India                                                                      |

### Rewritten implementation

```
from selenium import webdriver

from selenium.webdriver.common.by import By

from selenium.webdriver.support.ui import WebDriverWait

from selenium.webdriver.support import expected_conditions as EC

import time

driver = webdriver.Chrome()

wait = WebDriverWait(driver, 10)

try:

    driver.get("https://rahulshettyacademy.com/AutomationPractice/")

    checkbox = wait.until(EC.element_to_be_clickable((By.ID, "checkBoxOption1")))

    checkbox.click()
```

```
assert checkbox.is_selected()
```

```
field = wait.until(EC.visibility_of_element_located((By.ID, "autocomplete")))
```

```
field.clear(); field.send_keys("ind")
```

```
india = wait.until(EC.element_to_be_clickable((
```

```
    By.XPATH, "//li[contains(@class,'ui-menu-item')][normalize-space()='India']"))
```

```
india.click()
```

```
assert field.get_attribute("value") == "India"
```

```
print("PASS: checkbox selected; autocomplete value is India")
```

```
finally:
```

```
    time.sleep(5)
```

```
    driver.quit()
```

## Execution results

---

The procedure was tested on the live practice page on 16 September 2026.

| Check           | Observed result                                | Status |
|-----------------|------------------------------------------------|--------|
| Checkbox        | checkBoxOption1 reported checked after click   | PASS   |
| Suggestions     | Typing ind produced three matching suggestions | PASS   |
| Exact selection | Selecting India set the field value to India   | PASS   |
| Cleanup         | Browser session closed after verification      | PASS   |

### Evidence captured

Fresh browser evidence shows the autocomplete field populated with India and Option 1 visibly checked. The screenshot is provided inline with the delivery message.

### Conclusion: PASS

The checkbox and dynamic autocomplete workflow behaved as expected.
